

## AURORA \*RED\* FOR XBOX 360

Category : XBOX360-TUNING

The aurora vent lighting system creates more than one illusion: first, that your Xbox is emitting an unearthly glow, but also that you took a lot of time to create a custom LED array for your Xbox vent lights.

Instead, this product snaps into the custom LED holders included with the product, and plugs into the onboard power without any soldering.

Can be installed on the case bottom or top (for underglow or vent glow)  
Clear or Black PCB holders that snap into the vent holes of your Xbox 360  
PCBs are self adhesive and non conductive when used as underglow
